FREE RESUME GUIDE

The Impact Bullet Builder

Rewrite your resume bullets to show your impact and value — not just your job responsibilities.

The formula I used to land my first engineering role at John Deere — and engineers have used to land offers at Google, SpaceX, GE, Ford, and more.

WHAT'S INSIDE

01 Why Your Resume Is Invisible
02 Choosing Accomplishments

Launch to Lead

01 THE PROBLEM

Your Resume Is Invisible

Here's why your applications aren't getting responses.

Your bullets read like job responsibilities

"Managed project timelines" is a duty — not an accomplishment. Hiring managers see hundreds of these. They all sound the same.

You aren't backing anything up with numbers

"Improved efficiency" means nothing without a number. By how much? For how many people? Over what time period?

There's no detail on how you actually did it

What tools did you use? What method? Your skills should show up inside your bullets — not just in a separate list at the bottom of the page.

The business impact is nowhere to be found

Why did your work matter? What changed because of it? If a VP can't tell why they should care, your resume goes in the pile.

The single most impactful thing you can do for your resume is to turn your responsibilities into accomplishments. But how do you choose which ones?

02 CHOOSING ACCOMPLISHMENTS

Not All Accomplishments Are Equal

First, you need to figure out which accomplishments are *real* accomplishments. Start by thinking about the value and impact they provided. There are 3 tiers of value you can think of for any given experience:

★ You Did What Was Asked

You completed the task your manager gave you or what was expected of you. It's the baseline — you did your job. But there's no specific outcome, no indication you went beyond what was assigned.

"Maintained spreadsheets"

This is a duty, not an accomplishment. Every engineer on your team could write this exact same bullet.

★★ You Went Above and Beyond

You went beyond what was assigned or expected. Maybe you were proactive about it. You overcame a significant hurdle, learned a new skill to get it done, or improved the process for the next person who does it after you.

"Built an automated tracking system for 3 major programs, replacing a manual process that took 4 hours per week"

Now there's a real accomplishment — you saw a problem and fixed it without being asked. But we can go further.

★★★ You Spread the Impact Far and Wide

You did the ★ and ★★ work — and then you exported that value to a larger audience. You trained others on the team. You shared it with other managers so they could use it. You did a demo in the department meeting and helped others solve similar problems. The impact didn't stay with you — it spread.

"Built an automated tracking system for 3 major programs, saving 85% of manual reporting time, then trained 4 team leads to use it — now adopted across 3 departments for daily executive visibility"

Same work at the core, but the value reached far beyond you. This is what gets you hired.

Most engineering resumes are stuck at ★. The rest of this guide shows you how to push every bullet toward ★★★.

03 BEFORE THE FORMULA

They're Hiring You, Not Your Team

One more thing before the formula. This is critical.

Hiring managers are hiring **you**. Not your team. Your resume needs to make it clear what you personally did.

When you rely on "we" too much, it sends one of two signals — either you didn't do anything meaningful yourself, or you're so humble that you won't take credit for work you legitimately did. In a job application, **both are red flags**.

This isn't the time to be modest at the cost of looking like you did nothing. Take ownership of your accomplishments. Be proud of them. Be ready to talk about the details.

✗ "**We** delivered the project on time"

✓ "**I led** sprint planning and dependency tracking for 3 workstreams"

✗ "**The team** improved system reliability"

✓ "**I designed** the automated monitoring pipeline"

✗ "**Our group** redesigned the workflow"

✓ "**I proposed and implemented** the new process flow"

Open your resume. Search for "we," "our," and "the team." Replace every one with what you specifically did.

04 THE FORMULA

The Impact Bullet Builder

Every strong resume bullet includes these 4 elements. If a bullet is missing one, add it — or replace that bullet with a stronger one.

Accomplishment + Metric + How + Why = Impact

1. Accomplishment — What You Did

A specific thing you achieved — not a duty or responsibility. Start with a strong action verb.

"Redesigned manufacturing workflow" · "Automated testing pipeline" · "Led safety protocol revision"

2. Metric — The Numbers

Numbers that quantify what you did or the result. Estimates are fine — "approximately 30%" beats no number at all.

"Reduced cycle time by 35%" · "Cut defect rate across 4 platforms" · "Saved $120K annually"

3. How — The Method or Tool

Your approach, tool, or technology. Show your skills in action inside your bullets, not in a separate list.

"Using Lean Six Sigma" · "By implementing automated CI/CD" · "Through cross-functional workshops"

4. Why — The Business Impact

What changed because of your work? Why should the reader care? Put numbers here too when you can.

"Enabling on-time delivery for 12 clients" · "Eliminating $45K in rework costs" · "Freeing 3 engineers for higher-priority work"

05 FINDING ACCOMPLISHMENTS

How to Find Your Best Material

Most engineers undersell themselves because they don't know what counts as an accomplishment. Ask yourself these 5 questions for every role on your resume.

What problems did you solve that nobody asked you to solve?

If you noticed something broken and fixed it on your own initiative, that's ★★ material at minimum. Proactive problem-solving is exactly what hiring managers look for.

What processes did you improve or automate?

If something used to take hours and now takes minutes because of you, that's a measurable accomplishment. Even small automations count — especially if other people use them now.

What skills did you teach yourself to get something done?

Learning a new tool, language, or method on your own shows initiative. The accomplishment isn't the learning — it's what you built or improved because of it.

What work affected people beyond your immediate team?

If your work reached other departments, other sites, or external customers — that's ★★★ territory. Think about who else benefited from what you did.

What would NOT have happened if you weren't there?

This is the ultimate test. If the answer is "nothing — someone else would have done it the same way," it's a duty. If the answer is "this specific outcome," that's your accomplishment.

Quick Filter

If your bullet could appear on anyone else's resume who had the same job title, it's a responsibility — not an accomplishment. Rewrite it or replace it with something only you could have written.

06 FINDING METRICS

"But I Don't Have Metrics!"

You do. Here's how to find or estimate them.

1. **Ask your manager or team lead**
   "What was the business impact of [project]?" — They often have data you don't.

2. **Check company dashboards & reports**
   Quarterly reports, Jira stats, project retrospectives, internal KPI dashboards.

3. **Calculate time savings (see formula below ↓)**
   Most impactful source — works for any automation, process fix, or tool you built.

4. **Use conservative estimates with qualifiers**
   "Reduced processing time by approximately 30%" — Better than no number at all.

5. **Count scope and scale**
   "Served 500+ users" or "Deployed across 3 facilities" — Scale is a metric too.

⏱ The Time Savings Calculator

The single biggest "aha moment" for engineers who think they don't have metrics.

TIME SAVED/DAY		PEOPLE AFFECTED		WORKING DAYS/YR
30 min	×	5	×	250

= 625 hours/year × $50/hr =

$31,250

SAVED ANNUALLY — PUT THIS ON YOUR RESUME

Common Metrics by Category

Time & Efficiency
- Hours saved/week
- Cycle time reduction %
- Projects ahead of schedule

Quality & Reliability
- Defect/error rate reduction
- Uptime/availability %
- Customer satisfaction

Cost & Revenue
- Cost savings ($)
- Revenue generated
- Budget managed

Scale & Scope
- Users/customers served
- Team size managed
- Systems/facilities impacted

07 THE METHOD

How Did You Actually Do It?

The "How" is where your technical skills come alive. Instead of listing tools in a separate section, embed them directly into your accomplishments.

Most engineers list their skills at the bottom of the page. That's fine — but the real power is when those skills show up *inside your bullets*, attached to real results. That's what makes a hiring manager believe you can actually use them.

What Counts as "How"?

Tools & Technologies

The specific software, hardware, platforms, or instruments you used. SolidWorks, Python, MATLAB, Altium, Jenkins, SAP — name them.

"...using SolidWorks FEA analysis" — "...by building a Python automation script"

Methodologies & Processes

The frameworks or approaches you followed. Lean, Six Sigma, Agile, DMAIC, root cause analysis, DOE — these show you have a structured way of working.

"...applying DMAIC methodology" — "...through Agile sprint planning"

Collaboration & Leadership

How you worked with others to get it done. Cross-functional teams, stakeholder reviews, mentoring — these demonstrate soft skills through action.

"...coordinating across 4 subcontractor teams" — "...by leading weekly design reviews"

Problem-Solving Approaches

How you figured it out when there wasn't a clear path. Prototyping, testing, debugging, reverse engineering, research — these show how you think.

"...after diagnosing via thermal imaging" — "...by prototyping 3 design alternatives"

Your skills list tells hiring managers what you *know*. Your "How" tells them what you've actually *done* with it. That's the difference between a resume that gets scanned and one that gets read.

08 ARTICULATING IMPACT

Why Did Your Work Matter?

The "Why" is what separates a good bullet from a great one. It connects your work to something the business actually cares about.

For every accomplishment, ask: **"So what?"** Keep asking until you hit something a VP would care about. Usually it takes 2–3 levels.

THE "SO WHAT?" CHAIN

Level 1: "I automated the weekly report." — *So what?*

Level 2: "It saved 4 hours per week for 3 people." — *So what?*

Level 3: **"Those engineers were freed up to focus on the product launch, which shipped 2 weeks ahead of schedule."**

Level 3 is your "Why." That's what goes on the resume.

Common Impact Categories

Cost Savings

"Eliminating $45K in annual rework costs" — "Reducing scrap rate, saving $120K/year"

Time Savings

"Freeing 3 engineers to focus on higher-priority work" — "Cutting review cycle from 2 weeks to 3 days"

Risk Reduction

"Preventing SLA violations on a $200K client contract" — "Eliminating a single point of failure in the deployment pipeline"

Scale & Reach

"Enabling on-time delivery for 12 clients" — "Now adopted across 3 departments for daily executive visibility"

If a VP reads your bullet and can't tell why the work mattered to the business, add a "Why." If you can't find one — consider whether this accomplishment belongs on your resume at all.

09 REAL EXAMPLES

Impact Bullets by Discipline

See the formula in action across different engineering fields.

⚙️ Mechanical Engineering

✗ "Worked on improving assembly line efficiency"

✓ "Redesigned conveyor belt alignment system using SolidWorks FEA analysis, reducing assembly line downtime by 40% and saving $85K in annual maintenance costs — during a quarter when unplanned stops were costing $12K/hour"

⚡ Electrical Engineering

✗ "Designed circuit boards for new products"

✓ "Designed 4-layer PCB for IoT sensor module using Altium Designer, improving signal integrity by 25% and enabling UL certification on first submission — eliminating 8 weeks of re-testing that delayed the previous product line"

🏗️ Civil Engineering

✗ "Managed construction project timelines"

✓ "Led scheduling optimization for $2.4M bridge renovation using Primavera P6, completing project 3 weeks ahead of deadline and avoiding $45K in penalty fees while coordinating across 4 subcontractor teams"

💻 Software Engineering

✗ "Developed features for web application"

✓ "Rebuilt checkout API using Node.js and Redis caching, reducing page load time by 60% and increasing conversion rate by 12% ($340K additional annual revenue) for a platform serving 50K+ concurrent users"

📐 Industrial / Quality Engineering

✗ "Responsible for quality control processes"

✓ "Implemented 100% cross-training program for 12-person quality team using standardized work instructions, reducing absenteeism impact by 20% and saving ~$30K/year in temporary staffing costs"

10 TAILORING

Tailor Your Resume to Each Job Posting

Even great impact bullets get filtered if they don't match what the ATS is scanning for. Here's how to customize in under 4 minutes.

1 **Scan Keywords** MINUTE 1

Read the job posting. Highlight the 5–8 most important skills, tools, and competencies they mention. These are what the ATS is looking for.

2 **Swap Top Bullets** MINUTE 2

Reorder your bullets so the most relevant ones (matching their keywords) appear first under each role. The first 2 bullets get 80% of the attention.

3 **Mirror Their Language** MINUTE 3

Use their exact words in your bullets. They say "cross-functional collaboration"? Use that phrase, not "worked with other teams." Same meaning — their vocabulary.

4 **Export & Apply** MINUTE 4

Save as PDF. Apply. Move on. Targeted applications at 10–20% response rate beat spray-and-pray at 2–5%.

Application Timing Matters

- **Day 0–2: Green Zone**
  3× higher interview rate. Apply as soon as you see the posting.
- **Day 3–7: Yellow Zone**
  Still worth applying, but your odds are dropping.
- **Day 14+: Dead Zone**
  Position is likely already filled or in final interviews.

11 INTERVIEW PREP

Your Bullets = Interview Answers

Every impact bullet you write is a compressed story waiting to expand in an interview.

YOUR RESUME BULLET

"Redesigned conveyor belt alignment system using SolidWorks FEA analysis, reducing assembly line downtime by 40% and saving $85K annually"

Interviewer asks: "Tell me about a time you improved a process" ↓

S — Situation

"Our primary assembly line was experiencing 40+ hours of unplanned downtime per quarter, costing $12K/hour..."

T — Task

"I was tasked with diagnosing the root cause and designing a permanent fix..."

A — Action

"I ran FEA simulations in SolidWorks, identified misalignment under thermal expansion, and redesigned the mounting brackets..."

R — Result

"Reduced downtime by 40%, saved $85K in the first year, and the design was adopted across 2 other production lines..."

This Is Why Impact Bullets Matter Beyond the Resume

When you write 3–5 strong impact bullets per role, you're simultaneously building your interview story arsenal. Each bullet is a compressed STAR answer ready to expand.

Aim for 15+ stories total — that's enough to answer any behavioral question with confidence. You'll never be caught off guard by "Tell me about a time when..."

Your resume isn't just a document — it's your interview prep sheet. Every bullet you write well is one less question that catches you off guard.

12 YOUR TURN

Transform Your Resume Right Now

Pick your weakest bullet. Apply the formula. Turn a vague responsibility into a specific accomplishment.

Remember: You're not listing tasks, duties, or job responsibilities. Each bullet should be a **specific accomplishment** — something you personally achieved with a clear, measurable outcome. If it reads like a job description, rewrite it.

Your Original Bullet:

Write your current bullet here...

1. Accomplishment — What specific thing did you achieve?

Example: "Redesigned API architecture" (not "Responsible for API maintenance")

2. Metric — What was the result?

Example: "Reduced response time by 60%"

3. How — What method/tech?

Example: "Using GraphQL and Redis caching"

4. Why — Business impact?

Example: "Supporting 50K+ concurrent users"

Your New Impact Bullet:

Combine all 4 parts into one clear, complete sentence...

Repeat this for every bullet on your resume. Aim for 3–5 impact bullets per role. That gives you 15+ interview stories automatically.

13 BONUS

Use AI to Help — But Don't Let It Write For You

AI tools like ChatGPT are great assistants for resume work. Here's how to use them effectively without ending up with a generic, over-polished resume that doesn't sound like you.

Brainstorm accomplishments you've forgotten about

Paste in your job description and ask AI to help you think of accomplishments you may have overlooked. It won't know your specifics, but it'll jog your memory by asking the right questions.

> *"Here's my job title and description. Ask me questions that would help me identify specific accomplishments, metrics, and impact from this role."*

Tailor bullets to a specific job posting

Paste the job posting and your current bullets. Ask it to identify which keywords you're missing and suggest where to naturally add them — without changing the substance of what you did.

> *"Here's a job posting and my current resume bullets. Which of their keywords am I missing, and where could I naturally incorporate them?"*

Tighten your language

If a bullet is running long or feels clunky, ask AI to make it more concise. Give it the formula (Accomplishment + Metric + How + Why) so it knows the structure you're aiming for.

> *"Rewrite this bullet to be one sentence. Keep the specific numbers, tools, and business impact. Don't add anything I didn't say."*

⚠️ The One Rule

Never put anything on your resume that you can't explain in detail during an interview. AI can help you *say it better*, but every fact, number, and claim has to be real. If an interviewer asks "tell me more about that," you need to have the story.

WHAT'S NEXT

Getting a Great Engineering Job Takes 3 Things

1. **A resume that gets interviews**

   Your resume needs to clearly show what you accomplished, how you did it, and why it mattered — not just list your job duties.

2. **Interview answers that show your value**

   When they ask "tell me about a time when...", you need specific examples ready that show the impact you've had and the value you'd bring to their team.

3. **The ability to perform under pressure in the interview**

   Knowing your stories isn't enough — you need to deliver them clearly and confidently. That takes practice with real feedback.

This guide covers #1. The formula, the examples, and the worksheet are all designed to help you rewrite your resume so it gets callbacks.

If you want help with all three

I built a program for engineers who want personalized, hands-on help. We go deeper on the resume, then tackle the interview side — building your story arsenal, practicing delivery, and getting direct feedback from someone who's been on both sides of the hiring table.

It's 1-on-1, specific to your background, and you'll walk away with preparation you're genuinely confident in.

Learn More About the Full Program

No pressure. Just see if it's a fit.
