

I am Dr. Subodh Kulkarni, and hold multiple advance degrees with a MBA.

I am a seasoned Program Quality lead engineer who consistently have been driving quality outcomes by bridging product development and factory execution, bringing strong ownership across complex builds, cross-functional programs, and global teams.

While working as program QE for Yield 3.0, I have a senior DESIGN engineer, and quality engineers throughout the process and functions and multiple QEs while in MY26. I will be able to provide examples and evidence in our discussions.
