

Resume Analysis & Rewrite

Rim Khalil — Biomedical Engineering

Analyzed against the Impact Bullet Builder™ framework

Overall Score

18

out of 100

0 — Invisible

50 — Achiever

100 — Impact Standard

2/10

Accomplishments

Most bullets describe the process, not the outcome

2/10

Metrics

Scale numbers present (8 members, 12 weeks) — impact numbers needed

3/10

How / Method

Good tools listed — would be stronger shown inside bullets

1/10

Why / Business Impact

No bullet yet connects to a business or client outcome

★ Verdict: "You Did What Was Asked"

Your resume right now focuses on what you *did* but doesn't yet show what *happened because of it*. You led an 8-person team across two prototype deliveries — that's genuinely impressive for a student — but the resume hasn't given that impact the room it deserves, because process language like "facilitated," "coordinated," and "applied frameworks" takes center stage. The Transferable Skills section, which takes up about 40% of the page, restates your experience in a more general way instead of adding new evidence. The raw material here is strong: 88% WAM, Dean's List twice, EWB Challenge Top 3, a real consulting internship. This is a presentation problem, not a substance problem — and that's the easier kind to fix.

Key Issues Identified

1 The "Transferable Skills" section is taking up space that could be working much harder for you

This section takes up roughly 40% of your resume's real estate, and the problem is that each line makes a claim without backing it up with evidence. For example, *"Demonstrated ability to respond effectively to changing client requirements"* — a hiring manager reading this will think "says who?" You want to *show* skills through your results, not *state* them as standalone claims. The good news is that much of what's described here is already covered in your internship bullets — it just needs to be told through specific outcomes instead of restated in a separate section. Removing this section and reallocating the space to results-driven content is the single biggest improvement you can make.

2 Your internship bullets describe the process well — now they need the results

Your four internship bullets — "Led... delivering two prototypes... on schedule," "Facilitated weekly client meetings," "Applied design thinking frameworks," "Coordinated interdependent timelines" — all do a good job explaining what you did. The missing piece is what happened because of it. You delivered two prototypes — did the client adopt them? Did they solve the problem? Was the client spending \$[X] on the old process? Did your solution reduce something, improve something, save something? Adding that **Why** to each bullet is what turns "I did this" into "I made this happen."

3 Career Objective section isn't helping you stand out

"Motivated Biomedical Engineering student with a strong sense of curiosity about the medical industry" — the challenge here is that every applicant to a biomedical role could say the same thing. Career objectives were standard practice years ago, but today this space would serve you better as a 2-line professional summary that states your specific target role, your strongest accomplishment, and one differentiator (like your EWB Top 3 placement or your consulting experience). Alternatively, you could remove it entirely and let your experience speak for itself.

4

Your technical skills would be stronger shown in action

You have solid tools — SolidWorks, KNIME, C, Java, Python — but right now they're listed without appearing in any of your experience bullets. A hiring manager wants to see *how* you used them. Compare: "SolidWorks" on a list vs. "Modeled a [X]-component biomedical prototype in SolidWorks, iterating through [X] design revisions based on client feedback." The second version proves you actually know the tool. Try weaving your tools into your bullets so they pull double duty — showing the skill and the result at the same time. For Python, since you note it's "actively developing," it would be stronger to either reference a project you've started building with it, or hold off on listing it until you can.

5

There's an opportunity to add impact metrics throughout

The numbers you do have — "8-member team," "12-week timeline," "four project outcomes" — are good for showing scale. The next step is adding numbers that show *impact*: a percentage improvement, a time reduction, an efficiency gain, an error rate that dropped. Your internship delivered two prototypes to a real client — what changed for them? Did a process get faster? Did a manual step get automated? Did accuracy improve? Even conservative estimates ("reduced manual processing time by approximately [X]%") make a big difference. You don't need exact figures — thoughtful approximations work.

6

EWB Challenge Top 3 Finalist deserves more spotlight

Being selected as a Top Three Finalist in the Engineers Without Borders Challenge and presenting at the UTS FEIT Capstone Showcase is one of the strongest things on your resume. Right now it's a one-line bullet in "Awards" — and it deserves more room to breathe. What was the project? What problem did you solve for the Dawul Wuru Aboriginal Corporation? What was your engineering contribution? Expanding this into a full project entry with Impact Bullet Builder bullets would give you a section that proves you can engineer solutions to real problems for real communities.

7

High school entry can be removed to free up space

You're in your 4th year of a Bachelor of Engineering at UTS with an 88% WAM and two Dean's List recognitions — your university credentials speak for themselves. At this stage, the secondary school certificate from 2022 isn't adding to your story for a hiring manager. Removing it frees up space you can use for a project entry or additional experience details.

8

Activities section would be stronger with specific contributions

IEEE, Engineers Australia, Australian Bioinformatics and Computational Biology Society, Lucy Mentoring Program — you've clearly been engaged beyond the classroom, which is great. The next step is showing what you *did* within these organizations. Did you attend any conferences? Present anything? Organize a workshop? Mentor anyone? If you contributed something specific in any of these, add a bullet for it. For the ones where it's purely a membership, consider whether the space might serve you better elsewhere.

Rewritten Resume — Impact Bullet Builder™ Applied

[X] = placeholder where you need to provide missing information (metrics, specifics, or context only you know)

Rim Khalil

Rim.mkhalil@gmail.com | linkedin.com/in/rim-khalil-7949b9280 | rim-khalil-portfolio.netlify.app

REMOVE

"Motivated Biomedical Engineering student with a strong sense of curiosity about the medical industry, complemented by leadership experience and a genuine interest in consulting and management. Seeking opportunities to apply my technical and interpersonal skills in roles that sit at the intersection of biomedical engineering and impactful healthcare solutions."

→ Replace with nothing — or a 2-line professional summary: "Biomedical Engineering Honours student (88% WAM) with hands-on consulting experience delivering prototypes for healthcare clients. Seeking [X — specific target role, e.g. biomedical product development, medical device engineering, healthcare consulting]."

REMOVE ENTIRE SECTION

Transferable Skills

→ Delete all 6 "skill descriptions." They duplicate content from your Experience section in a vaguer format. All claims here ("Leadership and Team Supervision," "Design Thinking," "Communication") should be proven through results in your bullets, not stated as standalone claims. This frees up ~40% of your resume for impactful content.

EDUCATION

Bachelor of Engineering (Honours) — Biomedical Engineering

Feb 2023 – Nov 2026

University of Technology Sydney (UTS)

WAM: 88% | GPA: 6.71 | Dean's List 2024 & 2025

REMOVE

Secondary School Certificate — Rawdat El-Fayhaa Secondary School (2009–2022)

EXPERIENCE

Biomedical Engineering Consultant Intern

Nov 2025 – Feb 2026

Optik Consultancy | ALLIGA | Project Based

- **REWRITTEN** Led an 8-member multidisciplinary team across two parallel sub-teams to deliver two functional prototypes for **[X – client name or industry, e.g. "a healthcare device manufacturer"]**, solving **[X – what was the unmet user need? e.g. "a manual patient monitoring process that took [X] hours daily"]** – both solutions were accepted by the client and **[X – adopted? moved to next phase? selected for further development?]**.
- **REWRITTEN** Owned the client communication process across 12 weekly meetings, translating ambiguous requirements into **[X – how many?]** clear engineering specifications – this prevented **[X – rework? scope creep? misalignment?]** and kept both sub-teams building toward the same validated direction.
- **REWRITTEN** Modeled **[X – what component? the prototype housing? a medical device part?]** in SolidWorks, iterating through **[X]** design revisions based on client feedback and **[X – user testing? FEA results? ergonomic analysis?]** – the final design met **[X – what standard or criteria? biocompatibility requirements? manufacturing constraints?]**.
- **REWRITTEN** Analyzed **[X – what kind of data? user behavior data? clinical data? sensor readings?]** using KNIME to identify **[X – patterns? bottlenecks? user needs?]**, producing a data-driven recommendation that **[X – informed the prototype design? changed the project direction? validated the hypothesis?]** and was included in the final technical report delivered to the client.
- **REWRITTEN** Authored two technical reports and delivered the final showcase presentation to **[X – how many?]** client stakeholders, receiving **[X – what feedback? "positive client review"? "invitation to continue the engagement"? a specific quote?]**.

PROJECTS

Engineers Without Borders Challenge — Dawul Wuru Aboriginal Corporation 2023

University of Technology Sydney — **Top 3 Finalist** | Selected for FEIT Capstone Showcase

- **REWRITTEN** Designed **[X — what? a water system? a health monitoring tool? a community resource?]** for the Dawul Wuru Aboriginal Corporation to address **[X — what specific need?]**, using **[X — what engineering approach/tools?]** — the solution was selected as a Top 3 Finalist out of **[X — how many submissions?]** entries.
- **REWRITTEN** Presented the solution at the UTS FEIT Capstone Showcase to **[X — audience size?]** faculty, industry judges, and students, demonstrating **[X — feasibility? community impact? technical rigor?]** of the proposed design.

ADD MORE PROJECTS

With the Transferable Skills section removed and high school deleted, you now have significant space to add 1–2 more academic or personal projects. Think about: any capstone work, lab research, independent biomedical projects, data analysis coursework, or SolidWorks design work. Every project should have 2–3 Impact Bullet Builder bullets.

Arabic Teacher (Part-time)

Feb 2024 – Present

AlFirdaus College, Blacktown

- **CONSIDER REMOVING** ~~"Researched and curated learning resources to support student success across varied learning needs."~~
→ If keeping: "Designed and curated **[X]** differentiated learning resources for **[X — how many students?]** students across **[X]** grade levels, adapting materials for **[X — specific learning needs, e.g. ESL learners, advanced students]** — student **[X — test scores? engagement? completion rates?]** improved by **[X]%** over **[X]** semesters."
- **CONSIDER REMOVING** ~~"Collaborated with colleagues, parents, and stakeholders to support student outcomes."~~
→ If keeping: "Coordinated with **[X — how many?]** parents, **[X]** fellow teachers, and school administration to develop individualized support plans for **[X]** students — recognized as **Best Work Trainee 2024** for the quality and consistency of these efforts."
- **REMOVE** ~~"Balanced teaching responsibilities with full-time university studies, demonstrating strong time management."~~
→ The reader can already see from your dates that you worked and studied simultaneously — it comes through naturally. This bullet would be better replaced with a specific teaching accomplishment or removed to save space.

AWARDS & RECOGNITION

- **Top 3 Finalist** — Engineers Without Borders Challenge (Dawul Wuru Aboriginal Corporation 2023); selected to present at the UTS FEIT Capstone Showcase

- **Dean's List 2024 & 2025** — University of Technology Sydney, for outstanding academic performance (WAM 88%)
- **Best Work Trainee 2024** — AlFirdaus College, recognized for exceptional performance and dedication

LEADERSHIP & INVOLVEMENT

- **REWRITTEN** **Lucy Mentoring Program** (2024, 2025) — Mentored by professionals at ResMed and UTS; **[X — what skill did you develop? what career clarity did you gain? did you present anything? was there a project outcome?]**
- **REWRITTEN** **IEEE Member** — Engineering in Medicine and Biology Society (EMBS), Women in Engineering (WiE); **[X — attended any conferences? organized any events? participated in any competitions?]**
- **STEM Outreach Volunteer** — UTS (Mar-Aug 2024); **[X — what did you do? mentored students? led workshops? how many students impacted?]**

→ For Engineers Australia and Australian Bioinformatics and Computational Biology Society — if you've contributed something specific (event, presentation, committee work), add a bullet. If they're memberships without active involvement, the space might serve you better elsewhere.

TECHNICAL SKILLS

Programming: C (intermediate — **[X — what did you build with it?]**), Java (intermediate — **[X — coursework? data structures?]**)

Data & Analytics: KNIME (data exploration, visualization, predictive modeling — **[X — used in which project?]**)

Design & Modeling: SolidWorks (3D modeling of biomedical components — **[X — used in internship? coursework? number of models?]**)

Research: Laboratory procedures, experimental design, literature reviews, scientific report writing, budgeting and resource estimation

Languages: English (Fluent), Arabic (Fluent), Turkish (Conversational)

REMOVE ~~Microsoft Office Suite (Excel, Word, PowerPoint, Outlook)~~

→ Office proficiency is assumed for any engineering role at this point. This space would serve you better showcasing the tools that actually differentiate you.

REMOVE OR REFRAME ~~Python (actively developing)~~

→ "Actively developing" may unintentionally signal that you're not yet comfortable with it. It would be stronger to either reference a project you've started building with Python, or wait to list it until you have something concrete to point to.

Before & After — Best Examples

ORIGINAL (★ Level — Duty Description)

"Led an 8-member multidisciplinary team across two parallel sub-teams over a 12-week client-facing project, successfully delivering two prototypes, two technical reports, and a final showcase on schedule."

REWRITTEN (★★★ Level — Impact Standard)

"Led an 8-member multidisciplinary team across two parallel sub-teams to deliver two functional prototypes for [client/industry], solving [specific unmet user need, e.g. a manual process that took X hours daily] — both solutions were accepted by the client and [adopted / moved to next phase / selected for further development]."

ORIGINAL (Transferable Skills Section — Claim Without Evidence)

"Demonstrated ability to respond effectively to changing client requirements, unexpected challenges, and shifting team dynamics across a 12-week multidisciplinary internship, maintaining focus, motivation, and consistent performance across two simultaneous product tracks."

WHAT IT SHOULD BECOME (Real Bullet in Experience)

"Adapted mid-project when the client changed [X — scope? specifications? target user?] after Week [X], restructuring the timeline and reassigning [X] team members to a new workstream — delivered the revised prototype [on time / X days ahead of schedule] without requesting a deadline extension."

 ORIGINAL (★ Level — Needs a Specific Outcome)

"Collaborated with colleagues, parents, and stakeholders to support student outcomes."

 REWRITTEN (★★★ Level — Shows Impact)

"Coordinated with [X] parents, [X] fellow teachers, and school administration to develop individualized support plans for [X] students — recognized as Best Work Trainee 2024 for the quality and consistency of these efforts."

Action Items — What You Need to Do

1

Remove the Transferable Skills section and reallocate the space

This is the single highest-impact change you can make. The claims in that section are already covered by your Experience bullets — and experience bullets are more convincing because they come with context. Removing the section frees up ~40% of your resume for content that shows your value through results — more project entries, more internship details, or stronger bullet points with metrics.

2

Expand the EWB Challenge into a full project entry

Being a Top 3 Finalist is your strongest accomplishment. It's currently a one-line award buried at the bottom. Elevate it to a "Projects" section with 2–3 bullets: what you designed, for whom, what it solved, and the fact that it beat out [X] other submissions. This is the kind of content that makes a recruiter stop scrolling.

3

Add "what happened" to every internship bullet

You led a team, facilitated meetings, applied frameworks, and coordinated timelines. But what *changed* because of your work? Did the client adopt the prototypes? Did your process save the team from rework? Did the client come back for a second engagement? Think about the outcome of each action and append it to the bullet. "Led... delivering two prototypes" → "Led... delivering two prototypes that [were adopted by / solved X for / reduced X by]."

4

Show your tools inside your bullets, not in a separate list

SolidWorks and KNIME are listed in your Technical Skills but are invisible in your bullets. Did you use SolidWorks to model the internship prototypes? Did you use KNIME to analyze data for a project? Move these tools into your experience bullets: "Modeled [X component] in SolidWorks," "Analyzed [X data] in KNIME." This simultaneously proves you know the tool AND shows what you did with it.

5**Fill in every [X] placeholder in the rewritten resume**

The rewritten resume above has the right structure — your job is to fill in the details only you know. What was the unmet user need? How many design iterations? What data did you analyze? What was the client's reaction? Go through each [X] and plug in real numbers. Estimates are fine — "approximately 40% faster" beats no number at all.

6**Remove the Career Objective and high school entry**

The Career Objective as written could apply to any biomedical engineering student — it doesn't yet differentiate you. And at this stage in your engineering degree, the high school entry isn't adding to your story. Both are taking up space that could go toward project details, metrics, and results that set you apart.

7**Add 1–2 more academic projects**

Once you remove the Transferable Skills section, Career Objective, and high school, you'll have significant space. Think about coursework projects, lab work, or any independent engineering projects where you built, analyzed, or designed something. Each one needs 2–3 Impact Bullet Builder bullets with Accomplishment + Metric + How + Why.

8**Replace Microsoft Office with context for your stronger tools**

Office proficiency is assumed for engineering roles at this point — it won't move the needle for a hiring manager. That space would be better used adding context to the tools that actually set you apart: SolidWorks, KNIME, C, or Java — what did you build or analyze with each one?

✓ What's Already Working

Outstanding academics

88% WAM, 6.71 GPA, and Dean's List in both 2024 and 2025 in a Biomedical Engineering Honours program. This is a powerful trust signal — especially for a student. Keep it prominent and let it anchor your credibility.

Real consulting internship with real deliverables

You didn't do a "shadow a professional" internship. You led an 8-person team, delivered two prototypes to a real client, wrote technical reports, and presented at a showcase. The raw material for strong bullets is all here — it just needs outcome-focused reframing.

EWB Challenge Top 3 — genuine engineering competition result

Placing Top 3 in a national engineering challenge and being selected for the Capstone Showcase demonstrates that your engineering solutions can compete at a high level. This just needs expansion from a one-line award into a full project entry.

Trilingual — English, Arabic, Turkish

Fluency in three languages is a genuine differentiator, especially for roles in consulting, medical devices, or global companies. Keep this visible.

Diverse professional engagement

You've been in the Lucy Mentoring Program two years in a row (with mentors from ResMed and UTS), volunteered in STEM outreach, and hold IEEE and Engineers Australia memberships. This shows initiative beyond coursework — it just needs specific accomplishments attached to each one.

Scorecard: Impact Bullet Builder™ Criteria

Criteria	Score	Notes
Accomplishments (not duties)	2/10	Most bullets describe the process — "facilitated," "coordinated," "applied," "collaborated." The strongest one (leading the team to deliver two prototypes) hints at an accomplishment but stops at "on schedule" without stating the client outcome.
Metrics / Quantification	2/10	"8-member team," "12-week timeline," and "four project outcomes" show scale — the next step is adding impact numbers: percentages, time saved, efficiency gains, or outcomes achieved.
How / Method Shown	3/10	SolidWorks, KNIME, C, Java are listed in the skills section but don't yet appear in any bullet. "Design thinking frameworks" is mentioned in context, which is a start. Weaving tools into experience bullets would make both sections stronger.
Why / Business Impact	1/10	No bullet yet connects to a business outcome or problem solved. "Addressing an identified unmet user need" is the closest — expanding on what that need was and what changed when you addressed it would make a big difference.
Personal Ownership (not "we/team")	3/10	"Led" is a strong opener — more of that is good. The Transferable Skills section leans on phrases like "Demonstrated ability" and "Developed strong attention to detail," which don't tell the reader what you specifically did. There's room to make your personal contributions clearer throughout.
Problem Context / "So What?"	1/10	No bullet yet sets up the problem before showing the solution. The prototypes addressed an "unmet user need" — telling the reader what that need was, how it was affecting the client, and why solving it mattered would add significant weight to your strongest bullets.

Criteria	Score	Notes
Action Verbs	4/10	"Led" and "Facilitated" are decent openers. But "Applied," "Coordinated," "Researched," "Collaborated," "Balanced," and especially "Demonstrated" and "Developed" (in the Transferable Skills section) are mid-to-weak. Many bullets open with process verbs rather than impact verbs.
Bullet Quality Consistency	2/10	The Transferable Skills section takes up significant space without evidence to back it up. The internship bullets have good structure but follow a similar process-oriented pattern. The teaching bullets would benefit from specific outcomes. And the strongest accomplishment (EWB Top 3) deserves more room than a one-liner in Awards.
OVERALL SCORE 18/100 ★ "You Did What Was Asked" — strong foundation, needs outcome framing		

The Good News

This is a presentation challenge, not a substance one. You have an 88% WAM with back-to-back Dean's List in a rigorous Honours program. You led an 8-person team on a real consulting engagement and delivered two prototypes to a real client. You placed Top 3 in a national engineering challenge. You work part-time as a teacher while managing all of this and won Best Work Trainee for it. You're trilingual. The raw material here is genuinely strong — it just needs outcome-focused framing, stronger structure, and some metrics to let it come through. Applying the Impact Bullet Builder framework would likely push this resume from 18/100 to 55+ in a single focused session. The foundation is solid; you just need the right framing to let it speak.
