3/16/2026 17:42:04	hkohli@iastate.edu	Himani Kohli	hkohli@iastate.edu	May 27	I am targeting AI/ML engineer, computer vi	As a PhD student, I have worked on several technical projects in AI/ML, computer vision, and data-driven research, but I sometimes struggle to translate those projects into clear, concise resume bullets that match what recruiters are looking for. Another major frustration is the lack of responses after applying. It is hard to tell whether the issue is my resume, the way I describe my experience, or simply targeting the wrong roles. I also find it challenging to tailor my application materials for different positions without spending an overwhelming amount of time on each one. Overall, I would really like guidance on how to identify the right roles, position my research and technical experience effectively, and improve my chances of getting interviews.	https://drive.google.com/open?id=1kCJB	I'd like you to cover how to turn PhD research into strong industry-style resume bullet points, how to choose the right roles for my background, and what recruiters actually look for in resume formatting. I'd also appreciate guidance on talking about research in interviews/networking and tailoring resumes efficiently for different applications.
