

Alan Ulloa

Los Angeles, CA | 323.396.5700 | ajulloa1234@gmail.com | www.linkedin.com/in/ulloaalan/

PROFESSIONAL EXPERIENCE

- Technical Program Manager** | Applied Materials | San Jose, CA **July 2025-January 2026**
- Maintained program status and drove accountability across engineering, operations, and quality teams — tracking deliverables, managing schedule dependencies, and surfacing technical and programmatic blockers
 - Coordinated engineering design reviews, hardware validation checkpoints, and manufacturing release criteria — driving on-time milestone delivery across mechanical, electrical, and manufacturing stakeholders
 - Translated technical progress, production readiness risks, and resource constraints into concise leadership reports and executive briefings, supporting strategic decision-making and cross-campus alignment
 - Maintained a plan of record for program milestones, tracked costs and hardware receipt status, and coordinated space and resource allocation decisions across manufacturing stakeholders to support integration schedules
- Engineering Project Management Intern** | Bloom Energy | San Jose, CA **June 2024-August 2024**
- Developed production schedules and engineering roadmaps for electromechanical energy system development, coordinating design reviews and managing technical dependencies across a 20+ engineer cross-functional team
 - Authored a comprehensive build management manual and process flow map, capturing standard work procedures, training 7 engineers on implementation to improve production workflows
 - Led a process improvement initiative for the PCN approval workflow, standardizing request templates and reducing documentation delays — improving consistency and requirements clarity across mechanical, electrical, and manufacturing teams
- Quality Assurance Engineer Intern** | Honeywell FM&T | Kansas City, MO **June 2023-August 2023**
- Supported operations planning and process validation by designing automation tools, improving data transfer efficiency, and visibility across production systems
 - Designed and fabricated a 3D-printed tool holder for high-precision mechanical assembly, executing hands-on build and integration in a manufacturing environment to validate fit and performance
 - Conducted inspections and root cause analyses (5 Whys, Fishbone) to identify failure modes, drive corrective actions, and reduce nonconformances across the production system
- Laser Bond Engineer Intern** | Medtronic | Tempe, AZ **June 2022-August 2022**
- Designed and executed 65+ controlled experiments to characterize laser bonding process parameters from first principles, driving a 78.4% increase in battery production throughput in a regulated manufacturing environment
 - Analyzed experimental data in Minitab, validated process feasibility, and translated findings into hardware test plans to achieve quarterly yield goals
 - Proposed and implemented 20+ manufacturing process improvements through first-principles analysis, reducing process variability and improving consistency across production systems

PROJECTS

- Modular Gait Trainer** | Enabletech | Berkeley, CA **September 2021 – December 2021**
- Led a team of 5 engineers through end-to-end development of a modular assistive device — from requirements definition and CAD modeling in SolidWorks and Fusion 360 through prototyping and design iteration based on direct client feedback
- Binocular Holder** | Enabletech | Berkeley, CA **January 2021 – June 2021**
- Designed and prototyped a custom binocular holder in SolidWorks and Fusion 360 for a client with quadriplegia, delivering a functional prototype
 - Drove design iteration from concept through functional prototype based on direct client testing and feedback to optimize usability for hiking activities

LEADERSHIP EXPERIENCE

- Mentor Lead** | Berkeley Mentorship Cohort | Berkeley, CA **August 2023-December 2024**
- Led and coached 50+ mentors while organizing cohort events to improve engagement and program outcomes

EDUCATION

University of California, Berkeley **B.S. Mechanical Engineering**
Relevant Coursework: Thermodynamics, Fluid Mechanics, Heat Transfer, Mechatronics Design, Manufacturing & Design, Solid Mechanics

SKILLS

- **Technical:** AutoCAD, SolidWorks, Fusion 360, Minitab, Microsoft Office (Excel, Word, PowerPoint), Smartsheet, engineering drawing interpretation (GD&T)
- **Industries:** Semiconductor, Medical Devices, Energy Systems, Aerospace & Defense
- **Other:** Electromechanical systems, assembly/integration/testing, root cause analysis (5 Whys, Fishbone), nonconformance reduction, process documentation, production scheduling, technical writing (engineering reports, plans, presentations)
- **Languages:** English & Spanish (Full Professional Proficiency)
